Summary

A dedicated final-year Computer Science/Information Technology student with a dual specialization in Backend Development and Data Science. Proven track record in building efficient server architectures and transforming complex data into strategic insights through at least 6 implementation projects. Expert in bridging scalable back-end technical needs with machine learning algorithms to deliver comprehensive data-driven software solutions.

Education

Aug 2022 ~ Present

Computer Science

Institut Teknologi Garut

Bachelor of Computer Science

- Grade Point Average (GPA): 3.97/4.00
- Concentration: Artificial Intelligence
- Laboratory Assistant: Object-Oriented Analysis and Design (OOAD)
- Laboratory Assistant: Mobile Programming
- Data Analytics Training Certification
- Active Member of the Dicoding Community

Jan 2019 ~ Feb 2022

Computer and Network Engineering

SMK Negri 1 Garut

Vocational high school diploma

Experience

Aug 2025 ~ Sep 2025

Back-End Developer Internship

PT. Metanouva Infomatika

- Focus on API development for project management systems
- Successfully created 51 APIs within 1 month
- Develop a modular application architecture using the Repository Pattern and Unit of Work (UoW) patterns to separate business logic from data access and maintain transaction integrity.
- Successfully integrated authentication system with external Personnel API for user data synchronization and credential validation.
- Implementing Event-Driven Architecture to handle behind-the-scenes processes (side-effects) such as automatic notification delivery and email integration.

Projects

Jun 2025

Hello English Course

PHP | Laravel | Bootstrap

- Building an LMS platform for English learning with an "A" grade as the final result.
- Manage login and access control systems to maintain data and content security.
- Key Features: User account authentication, dynamic module and material management, structured learning flow with progress tracking, interactive quiz system with auto-grading, user score history, and admin panel for comprehensive content management and application statistics.

May 2025

Ora News

[Dart](#) | [Flutter](#) | [Python](#) | [Fastapi](#)

- Developed the digital news application "Ora News" as a major project for the Mobile Programming course, earning an "A" final grade.
- Developed a high-performance backend system using Python and the FastAPI framework integrated with a PostgreSQL database.
- Implemented a RESTful API architecture with a high-security authentication and authorization system based on JSON Web Tokens (JWT).
- Key Features: Authentication & profile management, self-service news publishing (CRUD), article categories, a search system with history, media uploads, and automated API documentation via Swagger.

May 2024

E-commerce

[Astro](#) | [Vue](#) | [Python](#) | [Fastapi](#)

- Developed an e-commerce platform as a major Database Programming lab project, earning an "A" grade..
- Developed a full-stack system using FastAPI (Python) for the backend, Astro and Vue.js for the frontend, and PostgreSQL as the primary database.
- Implemented system security through JWT authentication and account access control (RBAC) to separate access rights between users and administrators.
- Key Features: Product catalog with variant system, shopping cart, checkout process with shipping cost calculation, order management, user profiles, and a comprehensive admin dashboard for inventory and transaction monitoring.

May 2024

Donation System

[PHP](#) | [Laravel](#) | [Bootstrap](#)

- Designed and built an online donation system application using the Laravel framework as a major Web Programming Lab project, earning an "A" grade.
- Implemented a Model-View-Controller (MVC) architecture to ensure a clean code structure and ease of application maintenance.
- Key Features: User authentication system, donation campaign management (CRUD), interactive donation form with support messages, personalized donation history, and an admin panel for comprehensive data management.

May 2024

Pharmacy Cashier Frontend

[Vue](#) | [Tailwind](#)

- Developed a pharmacy cashier frontend system as a major project for the Object-Oriented Analysis & Design Practicum course, earning an "A" grade.
- Developed a responsive user interface using Vue.js and Tailwind CSS, and centrally managed application state through Pinia.
- Applied object-oriented design principles in UI component development to ensure modular, maintainable, and reusable code.
- Key Features: Security authentication, drug stock management (inventory, restocks, and batch details), sales transaction system (shopping cart and history), employee data management, product categories, and comprehensive business statistics reports.

Certificates

Jul 2025 ~ Jul 2030

Data Analytics

Information Technology Specialist

Oct 2024 ~ Oct 2027

Belajar Dasar Data Science

Dicoding Indonesia

Dec 2025 ~ Dec 2028

Belajar Dasar Visualisasi Data

Jan 2025 ~ Jan 2028	Dicoding Indonesia <u>Belajar Dasar AI</u>
Jan 2024 ~ Jan 2027	Dicoding Indonesia <u>Memulai Pemrograman dengan Python</u>
Aug 2020	Dicoding Indonesia Cyber Security Training: Modul CompTIA Security+ PT. Boer Technology (Btech) & InfraDigital Foundation

Skills

Language

Bahasa - Native
English - Intermediate

Soft Skill

Team Work, Problem Solving, Collaboration, Dedication

Hard Skill

Python, JavaScript, Vue, Astro, PHP, Laravel, Tensorflow, FastAPI, PostgreSQL, MySQL, TypeScript, Dart, Flutter, TailwindCSS
